Uka Tarsadia University (Diwaliba Polytechnic) Diploma in Computer Engineering/ Information Technology Assignment (Programming in 'C' - CE1001)

Unit 1: Fundamentals of Computer and Logical Thinking

- 1. Define Computer.
- 2. Explain block diagram of computer in detail.
- 3. Define:

Software

Hardware

- 4. State the difference between Software and Hardware.
- 5. Explain different types of software.
- 6. State the difference between System software and Application software.
- 7. What is programming language?
- 8. Explain types of programming language in detail.
- 9. Define compiler and interpreter.
- 10. State the difference between compiler and interpreter.
- 11. What is algorithm? What are the advantages and disadvantages of algorithm?
- 12. Define flow chart. Explain the use of various symbols used to develop flow chart.
- 13. Write an algorithm for find minimum number from two numbers.
- 14. Write an algorithm for find division of two numbers.
- 15. Draw the flowchart for find minimum number from three numbers.
- 16. Write an Algorithm & draw the Flowchart to convert temperature from Celsius to Fahrenheit.

Hint: F = (9/5 * C) + 32

17. Write an Algorithm & draw the Flowchart to find Area and Perimeter of Square.

Hint: Square Area = 1 * 1 & Square Perimeter = 4 * 1

18. Write an Algorithm & draw the Flowchart to find Area and Perimeter of Rectangle. Hint:

Rectangle Area = 1 * b & Rectangle Perimeter = 2 * (1 + b)

19. Write an Algorithm & draw the Flowchart to find given number is even or odd.

Unit 2: Basics of C (Part 1)

- 1. Write the importance of 'C'.
- 2. Explain basic structure of a C program.
- 3. Write down the steps to execute the C program. (Draw the figure also)
- 4. What is header file? Explain various header files.
- 5. What is a token? Explain classification of C token in detail.
- 6. Explain keyword and Identifiers with examples.
- 7. What is constants in C? List out classification of constants.
- 8. What is variable? Write down rules for variables. How can we declare the variables?
- 9. What is data type? List out data types with its size and range supported by C.
- 10. Explain user-defined type declaration with example.
- 11. Explain symbolic constants.

Unit 2: Operators and Expressions (Part 2)

- 1. What is operator? Enlist different types of operators.
- 2. Explain Arithmetic operators with example.
- 3. Explain Relational and Logical operators with example.
- 4. Explain Assignment operators with example.
- 5. Explain Increment Decrement operators with example.
- 6. Explain Conditional and Bitwise operators with example.
- 7. Explain the comma operator and size of operator.
- 8. What is Arithmetic expressions? Give some of the examples.
- 9. Explain Implicit and Explicit type conversion.
- 10. What is operator precedence and associativity? Write precedence and associativity of each operator supported by C.

Unit 3: Decision Making and Branching (Part 1)

- 1. Enlist decision-making statements.
- 2. Explain simple if statement with an example. (syntax (general form), flowchart, one example)
- 3. Explain if . . . else statement with an example.
- 4. Explain nested if . . . else statement with example.
- 5. Explain else . . . if ladder statement with example.
- 6. Explain switch statement with its syntax, flowchart and rules for it.
- 7. Write a C program to make a calculator using switch statement.
- 8. Write a C program using switch statement to check whether given character is vowel or not.
- 9. Explain conditional operator with example.
- 10. Explain goto statement.
- 11. Write a C program to for find given number is even or odd using goto statement.
- 12. Write a C program to find given number is even or odd using conditional operator.

Unit 3: Decision Making and Looping (Part 2)

- 1. Define the following:
 - i. Entry Control Loop
 - ii. Exit Control Loop
- 2. Write down the syntax of for loop.
- 3. Write down the syntax of while loop.
- 4. Write down the syntax of do...while loop.
- 5. Write down the syntax of nested for loop statement.
- 6. Write down the syntax of nested while loop statement.
- 7. Write down the syntax of nested do...while loop statement.
- 8. Enlist types of loop. Explain any one with proper example.
- 9. Explain for loop with an example.
- 10. Explain while loop with an example.
- 11. Explain do...while loop with an example.
- 12. Write a program to print 1 to 10 number using for loop.

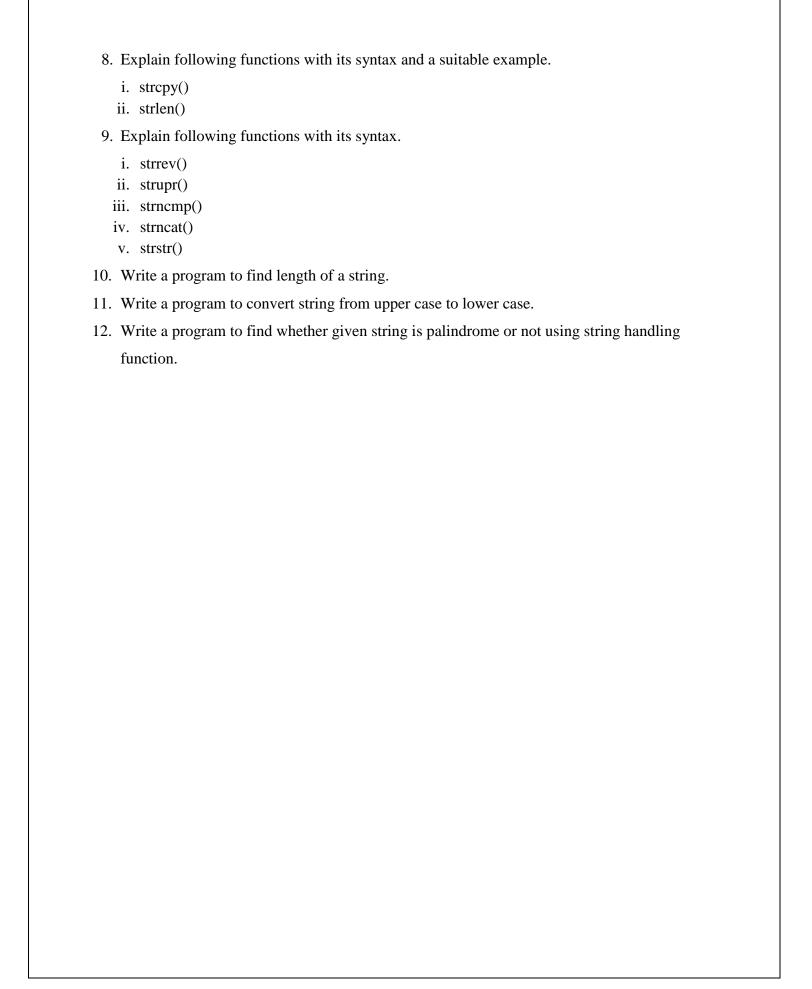

15. Explain nested loop with an example. 16. Explain break and continue statement with an example. 17. Define the following terms: i. break statement ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 333 20. Write a program to print following pattern: 1 23 456	ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	13.	Write a program to print 1 to 10 number using while loop.
16. Explain break and continue statement with an example. 17. Define the following terms: i. break statement ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	16. Explain break and continue statement with an example. 17. Define the following terms: i. break statement ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	14.	Write a program to print 1 to 10 number using dowhile loop.
17. Define the following terms: i. break statement ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 2 2 3 3 3 20. Write a program to print following pattern: 1 2 3 4 5 6 21. Write a program to print following pattern: A B C	17. Define the following terms: i. break statement ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	15.]	Explain nested loop with an example.
 i. break statement ii. continue statement 18. Write a program to print following pattern: ** ** ** 19. Write a program to print following pattern: 1 2 3 3 20. Write a program to print following pattern: 1 2 3 4 6 21. Write a program to print following pattern: A B C 	 i. break statement ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C 	16. 1	Explain break and continue statement with an example.
ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	 ii. continue statement 18. Write a program to print following pattern: * ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C 	17.]	Define the following terms:
18. Write a program to print following pattern: * * * * * * * * * * * * * * * * * * *	18. Write a program to print following pattern: * * * * * * * * * * * * * * * * * * *	j	. break statement
* ** ** ** 19. Write a program to print following pattern: 1 2 2 3 3 3 20. Write a program to print following pattern: 1 2 3 4 5 6 21. Write a program to print following pattern: A B C	* ** ** ** 19. Write a program to print following pattern: 1 22 3333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	i	. continue statement
** ** 19. Write a program to print following pattern: 1 22 333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	** ** 19. Write a program to print following pattern: 1 22 333 20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	18. `	Write a program to print following pattern:
* * * * 19. Write a program to print following pattern: 1	* * * * 19. Write a program to print following pattern: 1	:	e .
19. Write a program to print following pattern: 1	19. Write a program to print following pattern: 1		
1 2 2 3 3 3 20. Write a program to print following pattern: 1 2 3 4 5 6 21. Write a program to print following pattern: A B C	1 2 2 3 3 3 20. Write a program to print following pattern: 1 2 3 4 5 6 21. Write a program to print following pattern: A B C		
2 2 3 3 3 20. Write a program to print following pattern: 1 2 3 4 5 6 21. Write a program to print following pattern: A B C	2 2 3 3 3 20. Write a program to print following pattern: 1 2 3 4 5 6 21. Write a program to print following pattern: A B C	19. `	Write a program to print following pattern:
20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C	20. Write a program to print following pattern: 1 23 456 21. Write a program to print following pattern: A B C		
1 23 456 21. Write a program to print following pattern: A B C	1 23 456 21. Write a program to print following pattern: A B C		
1 23 456 21. Write a program to print following pattern: A B C	1 23 456 21. Write a program to print following pattern: A B C	20. 1	Write a program to print following pattern:
2 3 4 5 6 21. Write a program to print following pattern: A B C	2 3 4 5 6 21. Write a program to print following pattern: A B C		
21. Write a program to print following pattern: A B C	21. Write a program to print following pattern: A B C		
A B C	A B C	4	156
B C	B C	21. `	Write a program to print following pattern:

Unit 4: Array (Part 1)

- 1. Define Array. What is the staring index of an array?
- 2. Justify need of an array.
- 3. Enlist types of arrays.
- 4. What are the advantages of an array?
- 5. What is multi-dimensional array?
- 6. Write down the syntax to declare multi-dimensional array.
- 7. Enlist types of arrays. Explain anyone with a suitable example.
- 8. How to declare and initialize 1-D array? Explain it with suitable example.
- 9. Explain two dimensional array with its initialization.
- 10. How to initialize one dimensional array at run time?
- 11. Write a C program to display numbers of an array at odd index only.
- 12. Write a program to print elements present in even indices.
- 13. Write a program to find addition of two matrices.
- 14. Write a C program to print sum of all elements of an integer array.
- 15. Write a C program to print odd numbers from an array.
- 16. Write a program to find maximum elements from a matrix.
- 17. Write a program to copy elements from one matrix to another matrix.

Unit 4: String (Part 2)

- 1. Which function is used to find the string's length?
- 2. Enlist the different string handling functions.
- 3. Enlist different input and output methods of a string.
- 4. Explain gets() and puts() function with an example.
- 5. Enlist different input and output methods of a string. Explain any one with its general form and example.
- 6. Enlist the different string handling functions. Explain any two with its syntax and example.
- 7. Explain following functions with its syntax and a suitable example.
 - i. strcat()
 - ii. strcmp()

Unit 5: Functions

- 1. Define function. Write down the general form of the function definition.
- 2. Enlist the elements of user defined function.
- 3. What are the types of arguments in functions?
- 4. Define the following terms:
 - i. Actual arguments
 - ii. Formal arguments
- 5. Enlist categories of functions. Explain anyone with an example.
- 6. Explain Call by Value with an example.
- 7. Explain nesting of function with an example.
- 8. Explain any two categories of function with suitable example.
- 9. Enlist elements of user defined functions. Explain them in detail.
- 10. Define: recursion. Explain it with suitable example.
- 11. Write down the general format of function definition. Explain it with suitable example.
- 12. Explain function call with an example.
- 13. Write a program for any function which has arguments and return value.
- 14. Write down the syntax of function declaration. Explain it with an example.
- 15. Write a C program to find the factorial of any number using function.
- 16. Write a C program to describe recursion.
- 17. Write a C program to find sum and multiplication of two numbers using user-defined function.
- 18. Write a C program to find minimum number out of two numbers using user defined function.
- 19. Write a C program to find maximum number out of two numbers using user defined function.
- 20. Write a program to check whether the character is alphabet or not using user defined function.
- 21. Design calculator using user defined function.
- 22. Write a program to find last digit of a given number using user defined function.

Unit 6: Structure and Union (Part 1)

- 1. Write the general form of a structure definition.
- 2. Differentiate structure and union.
- 3. How to declare a union? Write down the syntax of it.
- 4. Write down syntax of structure data type.
- 5. Define a structure data type called mobile phone containing model and price. Write a C program to read data of 5 mobile phones and display it.
- Define a structure of customer that would contain customer name, address and amount of bill.
 Using this structure write a C program to read information of two customers and display on screen.
- 7. Define a structure data type called student containing id, name and total marks. Write a C program to read data of a student and display it.
- 8. Explain the concept of structure initialization.
- 9. Explain the concept of union with suitable example.
- 10. Explain array of structure with an example.
- 11. Explain the concept of 'array within structures' with suitable example.
- 12. Explain memory allocation in union with an example.

Unit 6: Pointer (Part 2)

- 1. Describe indirection operator.
- 2. Describe Address of operator.
- 3. What is pointer? How to declare the pointer variable?
- 4. What is the role of "*" operator in pointer?
- 5. Write a program to swap values of two variables using pointer.
- 6. Write a program to perform addition of two numbers using pointer.
- 7. Write a C program to perform arithmetic operation in pointer.
- 8. Enlist two arithmetic operations that can be used on pointers.
- 9. Explain chain of pointer in C.
- 10. Define pointer. Explain how pointers are declared and initialized.
